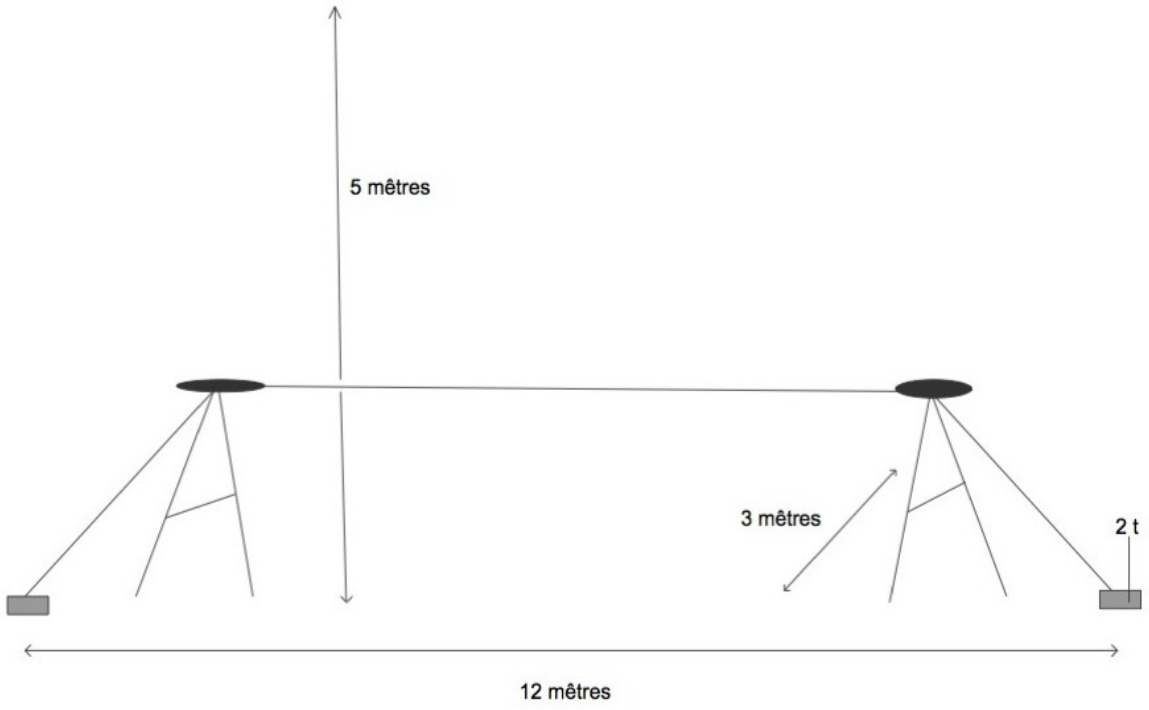
Technical Sheet

Tightwire – Marie Yuna Le Corre

stage : (ideal and necesary technical conditions to install a wire)

- flat stage and dry floor
- the act can be executed indoors but also outdoors, day or night
- a minimum distance of 12 meters between the two anchor points (40 feet)
- a minimum depth of about 3 meters (10 feet)
- 2 anchors points with a load capacity of 2 tons each (4400 lb)
- a minimum height of 5 meters (15 feet)

exemple of standard setting :



suggestions of hanging points : (if it doesn't already exist anchorage points on the ground)

- around tree using straps supporting 2 tons each (at both ends)
- barrels of water (or other heavy materials) can be positioned on wooden pallets, all strapped
- tongs into the ground (to plant tongs, check that no network gas, electricity water goes here!)

sound and light equipment :

- adequate sound system suitable for cd or mp3
- monitor (if possible)
- FoHx basic (to decide with the artist during rehearsals / hardware installations)

material provided by the artist :

- platforms / cables / spring / tirefort
- costume / makeup

others :

- 30-45 minutes preparing to install and test the wire. Presence of a technician necessary if the anchors points are to install.
- 30 min to repeat once the number, the presence of light and sound technicians required.
- Provide a place to wth mirror, good lighting
- provide a place to warm up with clean floor and if possible in a heated room

This fact sheet gives an idea dut is suitable for application. However, failure to comply with the technical specifications without the approval of the artist in advance may cause the innerser if the conditions are deemed dangerous and / or insecure ...
